

Tony Giech

giech.t@northeastern.edu | 781-417-9508

Boston, MA | github.com/tGiech22 | www.linkedin.com/in/tonygiech/

A collaborative, detail-oriented, and driven Computer Science student with a passion for data seeking a dynamic opportunity to make an impact and contribute to innovative real-world projects.

Education

B.S. in Computer Science and Business (Finance Concentration) at Northeastern University

Graduation: Apr 2026

PlusOne M.S in Artificial Intelligence at Northeastern University

Expected Graduation: Dec 2027

Honors: GPA: 3.68/4.00 | Dean's List

Relevant Coursework: Object Oriented Design, Algorithms & Data Structures, Foundations of Data Science, Foundations of AI

Skills

Operating Systems: Windows, Linux

Languages: Python, Java, C#, JavaScript/Typescript, GoLang, C/C++, HTML

Technologies: SQL, MongoDB, .NET, Git, React, PowerBI, Pandas, Numpy, Sklearn, Matplotlib, Node.JS, RESTfulAPI, FastAPI

Experience

Royal Philips | Cambridge, MA

Software Development Engineering Co-op

Jul 2025 – Dec 2025

- Built end-to-end test traceability solutions linking unit tests, requirements, test plans, and execution results, reducing manual compliance documentation efforts across engineering teams.
- Developed and tested new patient-monitoring features, including medication display enhancements and alarm-management functionality designed to reduce clinician alarm fatigue.

Insulet Corporation | Acton, MA

Data Analysis & Database Validation Co-op

Jul 2024 – Dec 2024

- Collaborated with cross functional teams on the SQUID project to document system, process, and user requirements facilitating the migration of 2 external Salesforce databases into an internal system, improving data accessibility by 45%.
- Analyzed 500+ complaint records to identify recurring product issues and customer pain points, creating reports influencing 3 product improvements and enhanced customer experience.
- Tested and validated 10 new features and change requests for the database reducing post-deployment issues by 30%.

Campus Activities

Generate Product Development Studio | Boston, MA

Software Engineer

Sep 2024 – Present

- Built a web-based forum that enables information exchange between current and prospective collegiate athletes and their families to streamline the recruitment process.
- Created a movie review mobile app connecting South Asian audiences via local events and community-driven film discussions.
- Developed a web app to connect pets with specialized vet care while enabling post-visit follow-up and continuity of care.
- Collaborated with a start-up to enhance a full-stack web-based scholarship platform enabling hospitals to support community college students through loans and sponsored training programs.

CS3500 Object Oriented Design | Boston, MA

Teaching Assistant

May 2024 – Jun 2024

- Led weekly labs for 30+ students delivering instruction on topics such as inheritance, encapsulation, and design patterns.
- Developed assessment criteria, systems, and exams for a class of 300+ students along with the Professor and fellow TAs.

Projects

Uplift Web App | Python & SQL Project

Mar 2025

- Developed a full-stack web application to centralize community care programs and resources, enabling users and organizations to create, manage, and discover local events. Designed features to connect communities with initiatives (e.g., food drives), improving accessibility and participation in local support programs.

NBA Conference Competitiveness Data Analysis | Python Project

Nov 2023

- Used numpy, pandas, sklearn, matplotlib, and seaborn packages to perform EDA, clean, shape, visualize, and analyze data to determine the competitiveness of NBA conferences. Created k-NN, random forest, and SVM models to make predictions about the data and created visualizations for each model.

Interests

Photography, Art, Swimming, Skiing, History
